COMBINE

NexusXplore

NexusXplore is an AI-enabled, investigation agnostic software platform built by intelligence industry experts at OSINT Combine.

NexusXplore optimises analyst workflows and enhances a professional's ability to illuminate insights, supporting intelligence production and threat detection in a low-attribution environment.

The platform provides advanced search and collection capabilities across the surface, deep and dark webs in a single user interface. It delivers speed by seamlessly combining thousands of commercially and publicly available datasets in a secure, browser-based ecosystem – all you need is an internet connection.

OSINT
COMBINE

NexusXplore

Due to its deep investigation capability, robust feature sets and best-in-class data, the NexusXplore platform is an essential tool for intelligence analysts, investigators, security teams and others responsible for crisis monitoring, executive and brand protection, disinformation research, geopolitical risk assessment and many other mission specific use cases.

Public / Person Records: Access to numerous APIs and 8+ billion records.

Corporate Records: Access to 400+ million company records.

Social Media: Access to user accounts across major social media platforms, forums, messaging services, marketplaces and more.

Geo Lens: Point-in-time, point-on-map feature pulling geographic-specific content: includes social media, news, radio stations, air and marine traffic, signals data and more.

Visual Graph: Rapid visualisation of platform or user-important data points. First-line tool for cross-platform social network analysis and pattern recognition.

NX Monitors: Enables persistent, automatic collection based on keywords or proximity.
*Dark Web and Breached Data monitoring currently in development.

Case Management: Client-side management of investigations allowing for the export of user-curated information collection.

Dark Web: Safe and secure in-platform access to dark web content from 2014 or access to the TOR network via a built-in, containerised browser for safe, live, dark web access.

Cyber Toolbox: Search names, emails, phone numbers, IP and physical addresses, usernames and breached credentials.

Commercial Telemetry Data: Access global location signals data overlaid onto a robust mapping tool for pattern of life and deep geospatial investigations.

Country & Travel Briefs: Aggregate and ingest country and travel information from dozens of sources in seconds with robust reporting, saving an analyst hours or days of collection efforts.

OSINT
COMBINE

At OSINT Combine, we are committed to the innovation of open source intelligence by providing leading edge technology solutions and unparalleled expertise. Our mission is to develop enduring open source intelligence capability within strategically orientated organisations, and are trusted by federal law enforcement, national security agencies, global banks and Fortune 500 companies worldwide.
